

Amp 5 Framework

Contract Value	£20Mpa	Commenced	2010
Contract Period	5 Years	Completed	Ongoing

Byzak has been appointed by Yorkshire Water as one of seven contracting partners to assist with the water company’s £1.35 billion asset delivery programme for the AMP5 period 2010 - 2015. The contract was signed on the 26th March 2010 during a launch event timed to coincide with the opening of Yorkshire Water’s new offices in Leeds by Secretary of State Ed Balls MP.

Byzak and two other contractors will have responsibility for the Medium Above Ground Treatment workstream (water and sewage treatment) and the value of Byzak’s work is expected to be around £100 million. Byzak has appointed Entec UK, a leading water and environmental specialist, as its design consultants.

Byzak will join the other contractor partners and Yorkshire Water staff in a newly created 500 strong Asset Delivery Unit based in the state-of-the-art Livingstone House, Yorkshire Water’s new offices in Clarence Dock, Leeds.

Dave Kirton, Byzak’s Deputy Managing Director, said, “We are extremely pleased to be chosen by Yorkshire Water and look forward to working with them to deliver their challenging investment programme over the next five years, and hopefully, beyond. Yorkshire Water is a very important new client for Byzak. The appointment complements our existing framework arrangements with United Utilities, Northumbrian Water and Scottish Water and will strengthen our position as multi-disciplinary company providing main contractor construction services to the UK water sector.”

Brief Description

- Both Sewage Treatment Works and Water Treatment Works and other related above ground assets.
- Investigation, design and construction
- Delivery of complex schemes & more straightforward direct delivery schemes

Individual projects are valued between £100k to £5m although these will be grouped together into Batches for the Amp 5 period.
